The Lecture Notes series is ideal for medical students, junior doctors and other allied health professionals. Lecture Notes: Haematology concentrates on providing the required core subject knowledge and has been extensively revised and updated to reflect the considerable advances in the understanding of the molecular biology and pathogenesis of haematological disorders, while continuing the tradition of successfully integrating the physiological, pathological and clinical aspects of haematology. Each chapter begins with a list of learning objectives that identifies the key elements that students need to know, whilst also taking learning to the next level. This new edition includes brief sections on the approaches to investigation and treatment of haematological problems, the underlying mechanisms and relationships concerning lymphomas and other neoplastic diseases of the bone marrow, and the rapidly changing area of bone marrow transplantation. Illustrated in full colour throughout, with new illustrations and photographs of important normal and abnormal blood cells, this eighth edition is a comprehensive guide to haematology and an essential aid for anyone who wants a concise introduction to the subject.

As the science and practice of haematology continues to advance at a considerable rate, Haematology Lecture Notes remains a comprehensive guide to this diverse subject, and provides support in understanding the pathogenesis and management of haematological disorders. Successfully integrating the physiological, pathological, and clinical aspects of haematology, this new edition includes new material on molecular and cellular diagnostics, expanded coverage on haemostasis, malignant haematology and transplant, and features self-assessment questions at the end of each chapter. Thoroughly revised and updated, Haematology Lecture Notes provides the core subject knowledge required by students and junior doctors to excel in this specialty.

Haematology Lecture Notes is an accessible and concise best-selling study guide, outlining the physiology, pathology and treatment of the most common blood disorders. Extensively revised and updated to reflect the considerable advances in the understanding of the molecular biology and pathogenesis of haematological disorders, it provides the core knowledge required by all medical students and junior doctors. Key features include: New material on coagulation and transfusion Expanded coverage of haematopoiesis A complete update of all malignant haematology content A brand new companion website at [www.lecturenoteseries.com/haematology](http://www.lecturenoteseries.com/haematology) featuring interactive MCQs with feedback on each answer selected, chapter summaries and revision notes in PowerPoint and PDF formats, and all the figures from the book in PowerPoint format Whether approaching haematology for the first time, or looking for a refresher, Haematology Lecture Notes will enable students and junior doctors to develop an understanding of both the basic science and clinical aspects of this specialty.

This new edition continues the tradition of integrating the physiological, pathological and clinical aspects of haematology, which is ideal for medical students, junior doctors and other allied health professionals. The book concentrates on the core subject knowledge and each chapter begins with a list of learning objectives that identifies the key elements that students need to know. There are also brief sections on the approaches to investigation and treatment of haematological problems. Extensively revised and updated to include the considerable advances in our understanding of the molecular biology and pathogenesis of haematological disorders Improved structure to allow students to find what they need quickly and easily Now illustrated in colour throughout with new illustrations and photographs of important normal and abnormal blood cells This comprehensive guide to haematology is an essential aid to anyone who wants a concise introduction to the subject and an ideal revision companion.
